INTERACTIVE WHITEBOARD GOES WIRELESS

Numonics Corporation introduces a robust RF wireless solution for Interactive Whiteboards

InfoComm 2002, Las Vegas, NV, June 10, 2002 - There are many instances when the RS232 cable that connects most interactive whiteboards to a computer, simply get in the way or prevent easy product sharing between locations. Numonics' family of collaborative communications devices are now available with the latest in RF wireless communications, as an option.

“Just connect the two small transceivers to the RS232 port on the interactive whiteboard and the computer system, then plug in the accompanying power supplies. There are no software drivers to load, making it easy to go wireless,” stated Alfred N. Basilicato President and CEO of the Interactive Products Division of Numonics Corp. “The RS232 cable will no longer limit the flexibility of using interactive technology in various settings in both schools and in corporations.”

“We have chosen the most robust wireless solution available based on the IEEE 802.11b standard operating in the 2.4GHz frequency range with a data transfer rate of 11 Mbps. Plus, it is compatible with both the Windows and Mac operating systems,” stated Ellis Lauman, Director of Software Development at Numonics Corporation. “Unlike low bandwidth line of sight products that allow a maximum distance of 15 to 30 feet and frequently loose signal, our solution will permit a signal to be transmitted wirelessly over a distance of 1,200 feet without interference.”

The large installed base of Interactive Presentation Managers may be upgraded to the new wireless technology. At an initial cost of \$549 per complete set, the product will be available for shipment on July 1st in limited quantities, and the by end of the summer in volume.

Numonics Corporation is an ISO 9001 certified company with 30 years of design, development and manufacturing experience and is an acknowledged technology innovator for collaborative computer devices. The Interactive Products Division was established in 1994 to develop innovative presentation, communication and training products. Industry awards have been won for product innovation, design engineering and computer productivity. Numonics' products are available through an international network of systems integrators, OEMs, resellers and distributors throughout the world.
