Numonics Corporation Honored with Presidential E-Award for Exporting Success

Washington – Today Commerce Secretary Carlos M. Gutierrez joined President Bush at the White House to present Numonics Corporation of Montgomeryville, Pa. with the Presidential “E” Award for excellence in exporting.

“Exports create good high paying jobs here in Pennsylvania, and Numonics Corporation at the forefront of innovation and competitiveness,” said Gutierrez. “I commend Numonics Corporation for helping to grow new markets around the world.”

The “E” Award is the highest honor the federal government can give to an American exporting company. The award serves to recognize U.S. firms for their competitive achievements in world markets and their part in increasing U.S. exports abroad. This marks the 45th Anniversary of the Presidential E-Award created by President John F. Kennedy in 1961.

“The E award symbolizes both our company philosophy to be a world-class manufacturer based in the U.S. able to compete in the global market and our employee's spirit to produce quality products with the proud label 'Made in the USA',” said Mr. Alfred N. Basilicato, Numonics Chairman & CEO.

The President's "E" Award may be given to persons, firms, and organizations engaged in the marketing of products that make significant contributions to the expansion of the export trade of the United States.

Numonics had been manufacturing and marketing precision measurement devices for the medical, imaging, construction, garment and GIS markets since 1969. The company realized the potential for improved communications and collaboration products and transforming its patented technology. It established the Interactive Products Division. This new division was dedicated to developing innovative presentation products to improve collaboration in small and large groups particularly in the education arena. Numonics introduced the world's first pen-centric interactive

whiteboard based on fast, accurate and durable electromagnetic technology. This was the next generation of interactive whiteboard.

In the United States and around the world, students, educators, trainers and presenters are benefiting from technology that allows them to share their ideas interactively without compromise. Numonics products are available through an international network of systems integrators, OEMs, resellers, and distributors throughout the United States, North and South America, Europe, Africa, Asia and the Middle East; international sales account for about 40 percent of Numonics' business.

Background:
