INTERACTIVE PRESENTATION MANAGER (IPM) - THE ULTIMATE TOOL FOR TODAY'S GLOBAL MEETING ROOM

"Computer generated presentations have taken a quantum leap with the introduction of the Interactive Presentation Manager (IPM)", stated Alfred N. Basilicato, President and CEO of the Interactive Products Division of Numonics Corporation. "IPM creates a link between the computer and the presenter. It is the control center for presentations or training and conferencing sessions. The IPM is the ultimate tool for today's high-tech conference facility or classroom."

The IPM is a digital electronic board that connects to a PC and LCD projector to create a large interactive projection screen. By touching the board surface with the electronic multi-media pen, the presenter controls the computer environment in real time. All program functions are transferred to the pen, enabling the presenter to remain in front of the audience without touching the computer. In essence, the electronic pen replaces the need for a "mouse" to activate commands thereby saving time, ending confusion and improving eye contact with the audience.

User definable Softkeys, conveniently located on both sides of the IPM, permit fast launch of video, audio, graphics/text, and animation software. Touching the Softkeys with the electronic pen instantly activates pre-selected programs, like a PowerPoint presentation. The Softkey Editor offers direct access to any file/software available on the system. These dynamic tools dramatically reduce the preparation time for the presenter or instructor.

The Virtual WhiteBoard (VWB) software that comes with the IPM eliminates the need for a traditional dry-erase or chalk board in the classroom. VWB uses virtual ink and all notes and illustrations are saved automatically for later distribution via email or printer. This powerful software allows the user to annotate in color, highlight and make shapes, plus you may cut and paste bitmap images to and from VWB pages and Windows applications like MS Word or PowerPoint.

The IPM also features a hard laminate, matte screen finish, creating a durable, high quality projection surface. It is available in three sizes; 26" x 38" (67cm x 97cm) with a screen diagonal of 47" (119cm); 38" x 50" (97cm x 127cm) with a screen diagonal of 62" (157cm); and 46" x 63" (116cm x 161cm) with a screen diagonal of 77" (196cm). IPM streamlines the presentation process

while it increases both the interest of the group and their level of active participation. The unique Tutorial and On-line Help file provides easy access and understanding for answers to every operational issue. It's simple and it works!

Numonics Corporation is an ISO 9001 certified company with 30 years of design, development and manufacturing experience and is an acknowledged technology innovator for collaborative computer devices. The Interactive Products Division was established in 1994 to develop innovative presentation, communication and training products. Industry awards have been won for product innovation, design engineering and computer productivity. Numonics' products are available through an international network of systems integrators, OEMs, resellers and distributors throughout the world. For additional information on the Interactive Presentation Manager (IPM).
